

Appeal to ambitious persons from various countries,
who want to make their careers in the IT sphere

Dear Colleagues!

If you are at the stage of searching a prestigious and highly paid job (or have already found it) in any famous foreign IT-company, assuming your great luck to work there, or if you work in any capacity in a small domestic company, then you may be interested by this proposal, because it is more ambitious than the goal set by you to make a career in your workplace.

It is known that many large foreign companies are now engaged in an aggressive worldwide human resources policy to recruit the most intelligent and talented individuals, regardless of countries of their residence, thereby objectively inflicting to these countries big intellectual damage, especially to those which are not advanced. And would you like instead of a prestigious job on "alien uncle" to participate in creation of the unique IT-company, that has all chances to become as famous and powerful as Microsoft, Apple, or Sap Corporation? This will not only give yourself a great career in this field, but also bring appreciable benefit to your country, which thus becomes a "trendsetter" in this area of scientific and technical progress.

Now we, the initiators and developers of one ambitious innovative project, representing a new network science-intensive technology, entitled "**Information technology of automation of control of discrete technological and information processes** (in short - **IT AC DTIP**)", came to the stage of forming a team of enthusiasts-associates, who is going to soon establish a production company on implementation to life of this technology. We invite you to take part in competition for the vacant places in this team. We first of all need the leading specialists of the following profiles: marketer, manager and a network programmer (necessarily), as well as a business partner (desirably). In the future we may need and other responsible persons, who also will be able to claim the role of the co-founders, namely: a systems analyst, applied mathematician and programmer, a leading translator of interfaces of our software tools, an organizer of the learning process for the preparation of practitioners on this technology, as well as persons responsible for the implementation of IT AC DTIP in different application areas.

Each member of this team will have to take responsibility for a specific area of activity of the future production company. But in order to really become its co-founder, he have to perform free of charge (as his founding contribution) some preparatory work in field of his competence concerning promotion of the company, because we do not have any investor. By the way, we can do without him, because this project is now at the stage of startup (the main network optimizing software tools have been already developed by us). In this you can see for yourself by visiting our two websites: "**Promotion center of IT AC DTIP**" (its address - <http://promo.dtip-optim.com/en>) и "**Implement. center of IT AC DTIP**" (<http://dtip-optim.com/en/main>).

To participate in this competition requires the following mandatory conditions: your innate ambition, as well as "burning" of your eyes from acquaintance with this ambitious project. Besides, you have to be a professional in the field of your activity.

If these conditions are met and this proposal you are really interested in, then select at least one free day to get acquainted in detail with the project, all necessary information about it is presented on the abovementioned two websites (in particular, on the main page of the first of them are listed convincing arguments in favor of that IT AC DTIP is a unique, ambitious and commercially promising project). After that you can apply to me on the following contacts with your counter proposals.

Yours faithfully,
Burlakov Michael V.,
D.Eng., the founder of IT AC DTIP
(Kiev, Ukraine)
